

## Maintenance and care instructions for TECTUS series

Your SIMONSWERK TECTUS hinges have been manufactured of high quality material with various coatings applied for protection and durability.

Climate, location and exposure to corrosive environments such as industrial areas, pesticides, herbicides or salt will affect the amount of care required to maintain the hinge's beauty and characteristics, e.g. coastal areas will require more frequent cleaning. Clean the hinges as needed, using a mild detergent and a soft cloth. Avoid abrasive cleaners, cloths or brushes.

**Caution:**

Do not apply harsh chemicals and cleaners such as Hydrogen Chloride (hydrochloric acid), Sodium Hypochlorite (chlorine bleach) or Hydroxyacetic Sulfuric Acid (mineral deposit remover) to hinges. Do not use organic solvents for cleaning purposes, because coating damage could occur. The above list of harsh chemicals and cleaners are only examples and not a complete list – for more information contact SIMONSWERK North America.

**Note:**

The SIMONSWERK TECTUS hinges are manufactured with maintenance free slide bearings. These slide bearings DO NOT require any kind of lubrication. Lubricating could RESULT IN DAMAGE which would void the warranty.
